## DETAILED ACTION

### *Claim Objections*

1. Claims 1-5 are objected to because of the following informalities:

In Claim 1 (line 5), should “an” be -- each -- as indicated in the general formula (1)?

Appropriate correction is required.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 and 4-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Colas (EP 382 338) as evidenced by Butler (EP 251 435).

Colas discloses a composition comprising an MQ resin containing hydroxyl or alkoxy groups and an  $\alpha,\omega$ -dihydroxy diorganopolysiloxane. The MQ resin containing hydroxyl or alkoxy groups can be prepared by reacting an MQ resin containing SiH groups with an alkenyl group-containing trialkoxysilane. The MQ

resin containing SiH can be prepared according to Butler. The composition can be cured by moisture (i.e., a crosslinker). (col. 1, line 1 to col. 3, line 26, col. 4, line 38 to col. 5, line 32 and Examples) Note that Butler's MQ resin can contain silanol groups. (page 4, 2<sup>nd</sup> paragraph) Colas does not teach the method for preparing the reaction mixture set forth in the instant claim. However, the instant claims are product-by-process claim. "Even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process" In re Thorpe, 777 F. 2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985). Since Colas' composition is substantially the same as that of Applicants', Examiner has a reasonable basis to believe that Colas' composition should be able to function as an adhesive. Since PTO does not have proper means to conduct experiments, the burden of proof is now shifted to Applicants to show otherwise. *In re Best*, 195 USPQ 430 (CCPA 1977). Colas further teaches the use of the composition as self-leveling sealants. (col. 6, lines 9-11)

4. Claims 2-3 would be allowable if rewritten to overcome the claim objection, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

None of Colas and Butler, taken alone or in combination, does not teach or fairly suggest the composition set forth in the instant claims.
